OFFSHORE PUBLICATIONS PROGRAM

The Minerals Management Service (MMS) established a scientific and technical publications program for Offshore Minerals Management in 1984. The objective of the program is to make the investigative findings of the Offshore Program available to the public. The Technical Publications Unit (TPU) within the Office of Offshore Information and Publications operates this program. The TPU has assigned series designations and publication numbers to official scientific and technical documents issued by the Offshore Program since January 1, 1984. Documents are numbered consecutively within each calendar year and assigned one of the series designations listed below.

Informal documents, those requiring quick release to the public, comprise the following Outer Continental Shelf (OCS) series:

OCS Reports. Continental Offshore Stratigraphic Test (COST) well reports, investigations, risk analyses, resource estimates, Environmental Impact Statement (EIS) support documents, preliminary reports, etc.

OCS Studies. Contractually prepared environmental and socioeconomic, resource evaluation, and technological studies.

OCS Maps. Geologic, bathymetric, resource, biogeologic, and coastal maps. (Some resource and coastal maps, and atlases may be considered formal because of their long-term interest and use of color; however, MMS places all maps in the OCS Map series.)

Formal documents, those reports with broad or long-term interest to the public, comprise the following OCS series:

OCS Monographs. Various technical and professional papers.

OCS Information Reports. OCS Information Program (OCSIP) documents.

OCS Standards. Platform verifications, well-control training, Best Available and Safest Technology (BAST), etc.

OCS Environmental Impact Statements/Environmental Assessments (EIS/EA). Draft EIS, final EIS, and regional or areawide EA.
